Phoebe Lin

Currently, I design agentic workflows to help creators grow and scale their games as businesses at Roblox. Before that, I designed for K-12 and college readiness at Chan Zuckerberg Initiative. As a designer, I'm interested in how we design for uncertainty and learning in the era of AI. I'm good at taking complex, ambiguous spaces, and turning it into things that are intuitive and simple.

Roblox Agentic Creator Hub

A new interaction model for Roblox creators to create and scale their games with agents

ROLE	Product design lead
TEAM	1 designer, 4 engineers, 1 PM
TIMELINE	Jan – Aug 2026
OUTCOME	Rolled out as a Creator beta with 40% stickiness and 80% positive rating. Recommendations led to downstream +7.2% lift in monetization features.

www.phoebezlin.com/work/agentic-hub

CONTEXT

Today, running a business on Roblox requires a lot of manual, repetitive work, ranging from liveops management to safety and compliance. Our vision is to make Hub the place where studios can run their business with a team of humans and AI agents working side by side.

KEY DECISIONS

01 ### The agent works; the creator leads

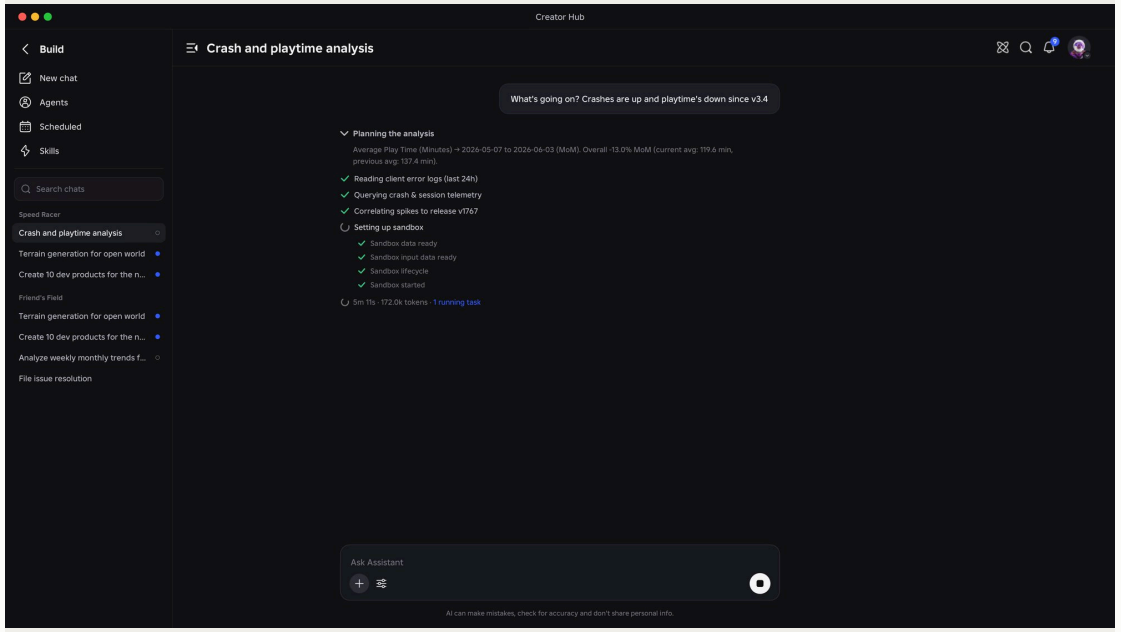

How do we balance agents working autonomously towards a goal while surfacing important decisions appropriately for creator approval?

02 ### Safety and oversight at its core

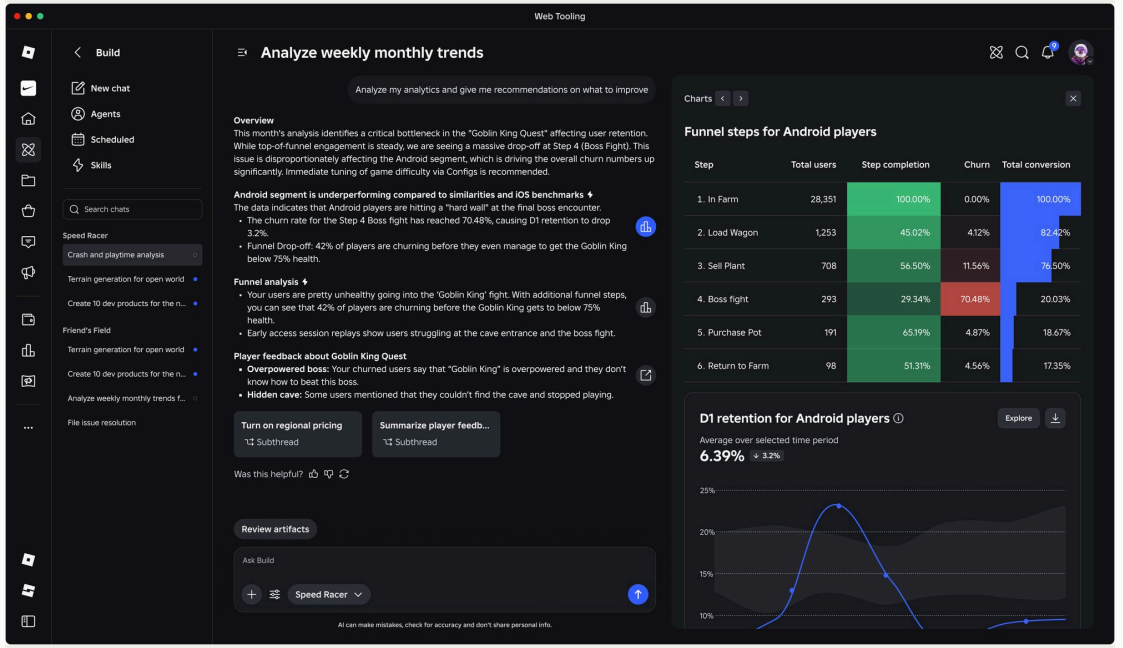

When agents make mistakes, how do we surface them to the creator in a way that is easy to understand and action on? How do we prevent hallucinations and give creators the ability to audit and develop within a safe ecosystem?

03 ### Vertically integrated context

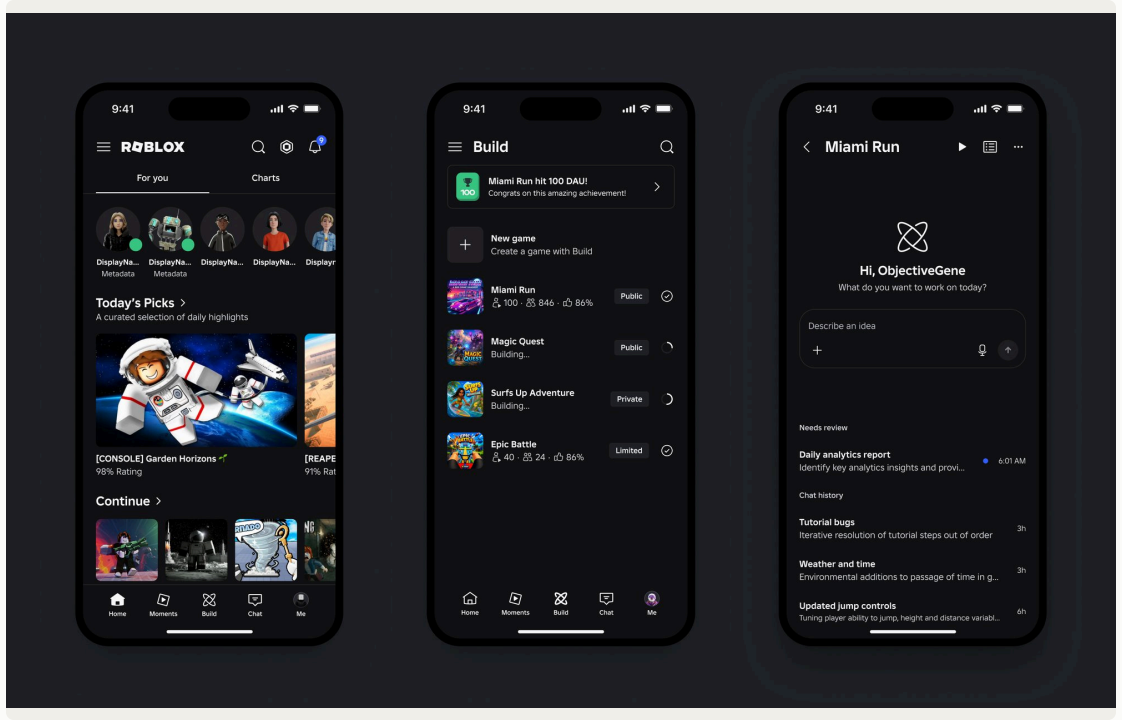

How do we capture value that leans into the strengths of the Roblox ecosystem?

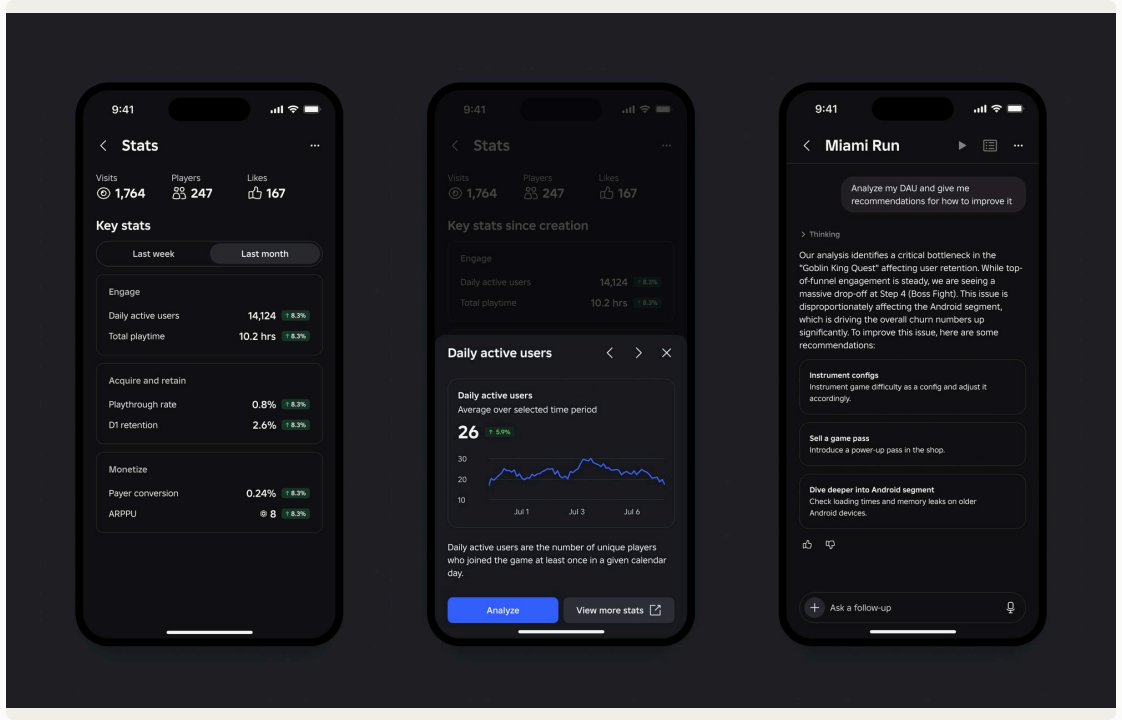

01 — Chat UI on web VIDEO ON SITE

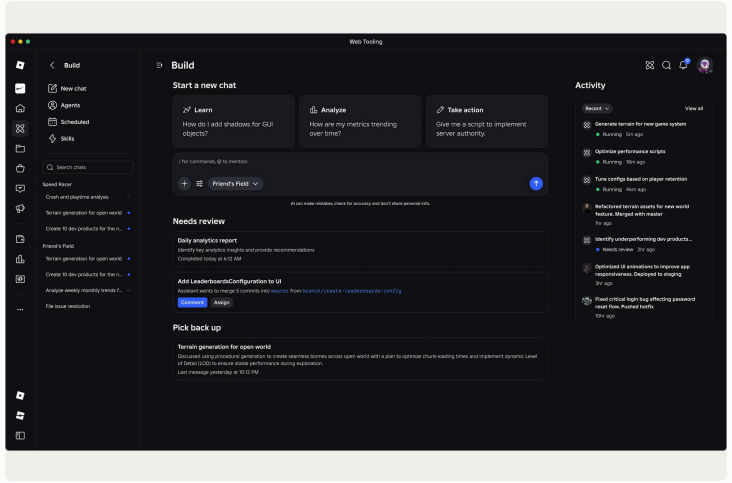

02 — A still of the chat UI on web

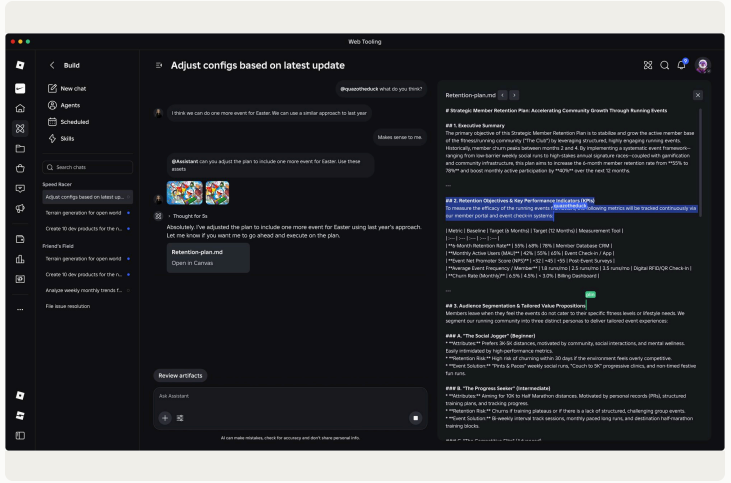

03 — Build on mobile

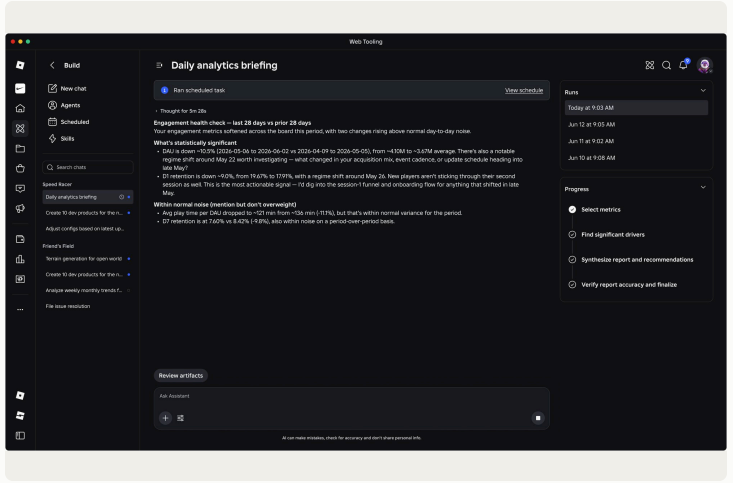

04 — Analytics in Build

05 — Concept of landing page with unified ledger

06 — Concept of multiplayer prompting

07 — Concept of scheduled cron jobs

02 · MAR 2026

Roblox Analytics Platform

A 0 to 1 journey of how we built out a full product suite of analytics, observability, and experimentation tools for Roblox creators

ROLE	Product design lead
TEAM	1 designer, 20 engineers, 3 PMs
TIMELINE	Nov 2023 - Sep 2026
OUTCOME	We grew weekly usage to over 90% of our top creators. Our products added +0.93% lift in total Robux spent in H1 of 2026 alone, which translates to ~$24M in business value.

www.phoebezlin.com/work/analytics

CONTEXT

Many creators still struggle to separate signal from noise while growing their games. Our vision was to deliver a trusted analyst that can help creators understand, diagnose, and act quickly. We accomplished this through 3 pillars: (1) comprehensive performance observability, (2) flexible data exploration, customization, and experimentation, and (3) AI-driven insights and frictionless analytics.

KEY DECISIONS

01 ### Turn data into insights into action

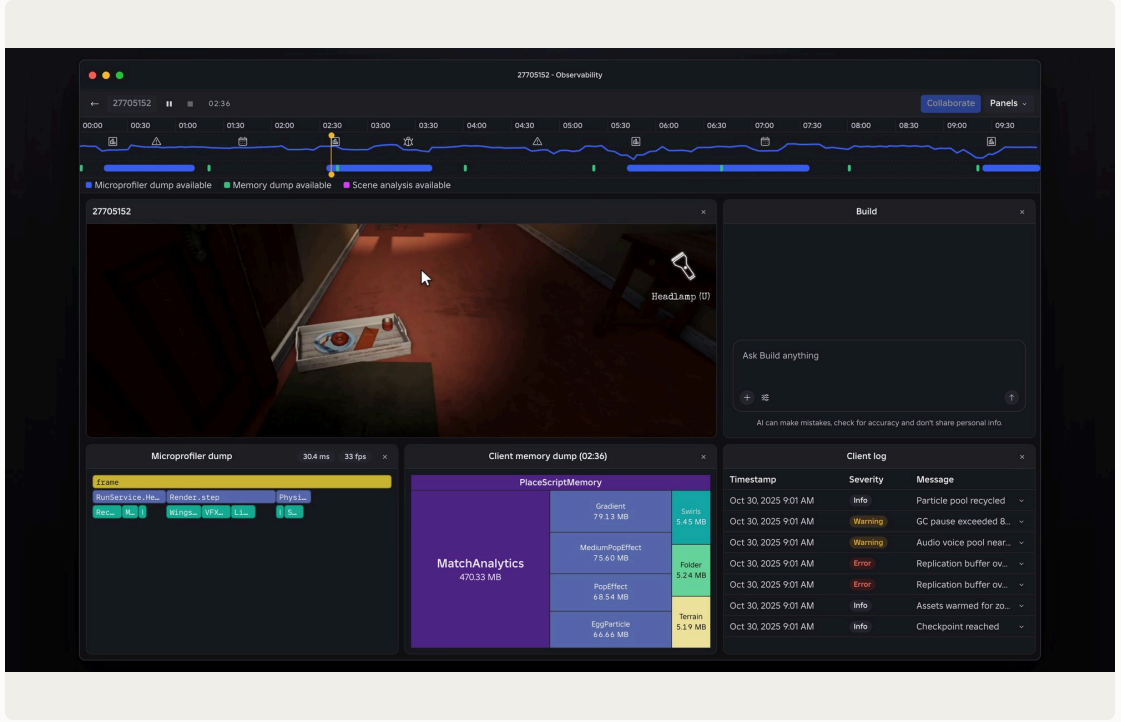

First we build the data pipelines, then we layer insights on top. How do we provide the right recommendations at the right time to help creators focus on the highest ROI opportunities?

02 ### The power to diagnose regressions and assess impact

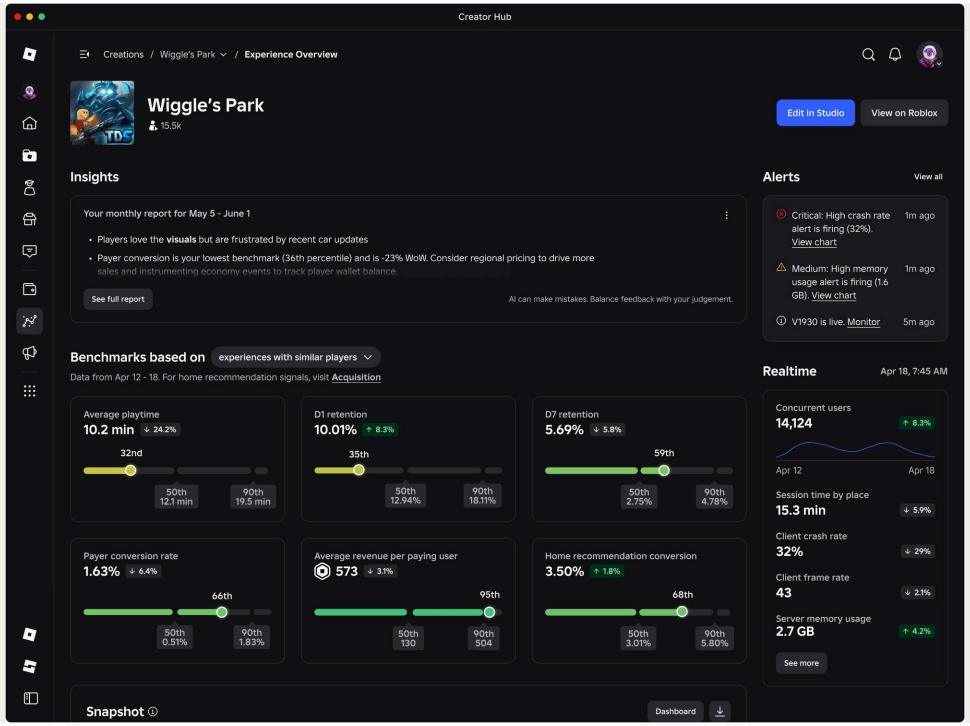

Observability enables creators to triangulate the root cause of a regression. Experiments allow creators to A/B test differentials in the game experience. How does each MVP ladder into a coherent vision?

03 ### A horizontal design system for data viz

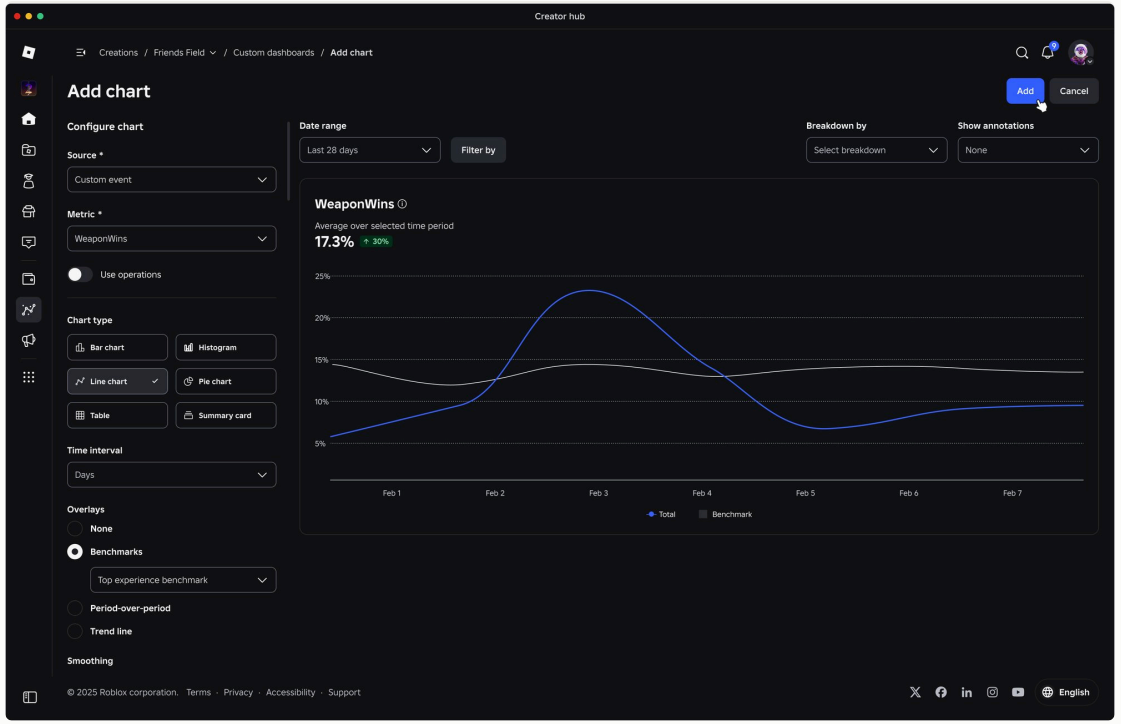

How do we design the atoms, molecules, and organisms of data viz that enable modular construction? And how do we set up the processes and framework that allow any team at Roblox to plug in and build fast?

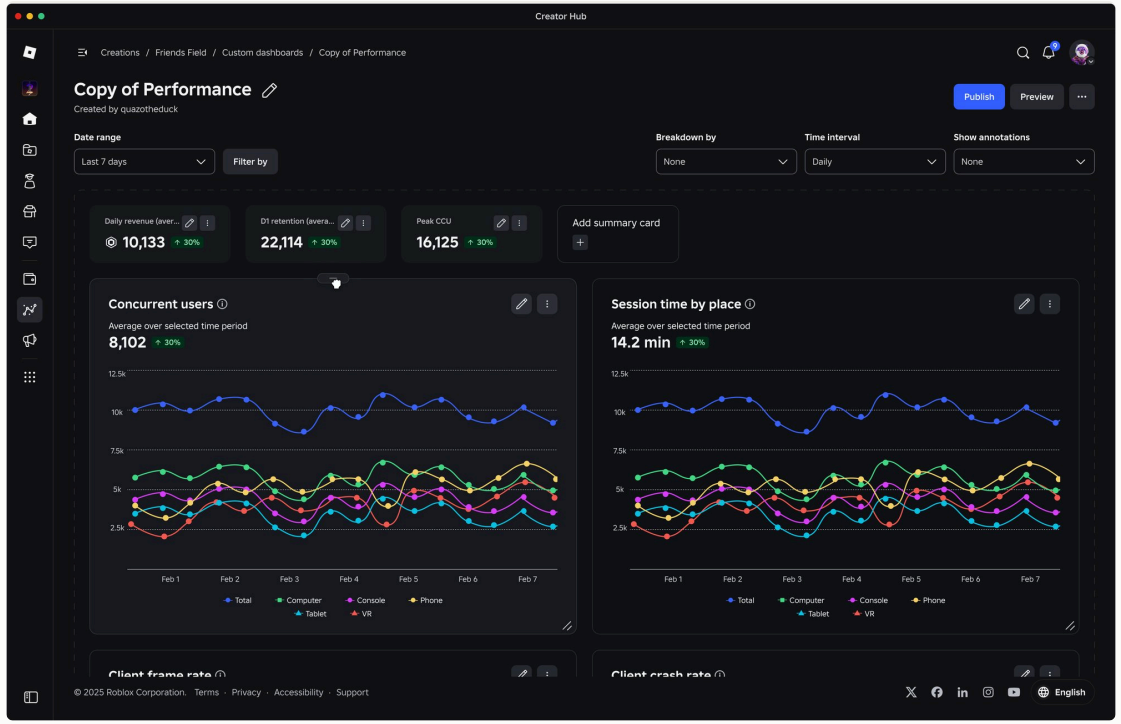

01 — Observability platform VIDEO ON SITE

02 — Landing page for all games

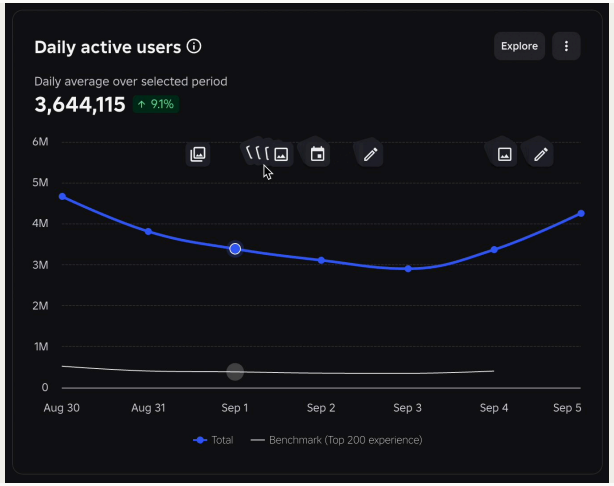

03 — Explore and/or add a metric to a dashboard

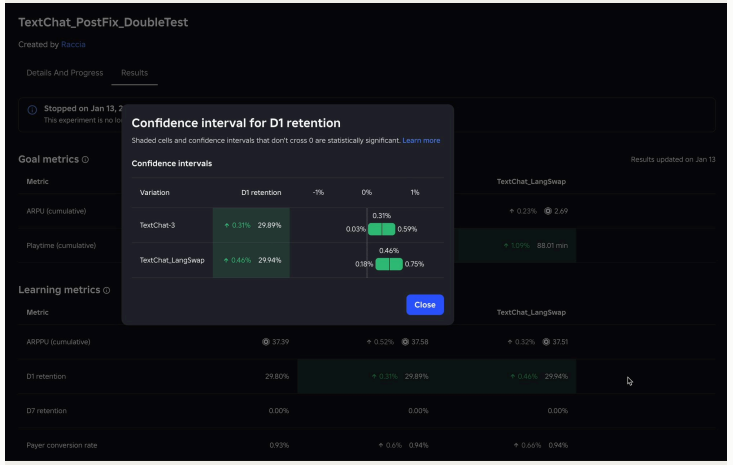

04 — Edit mode on a customizable dashboard

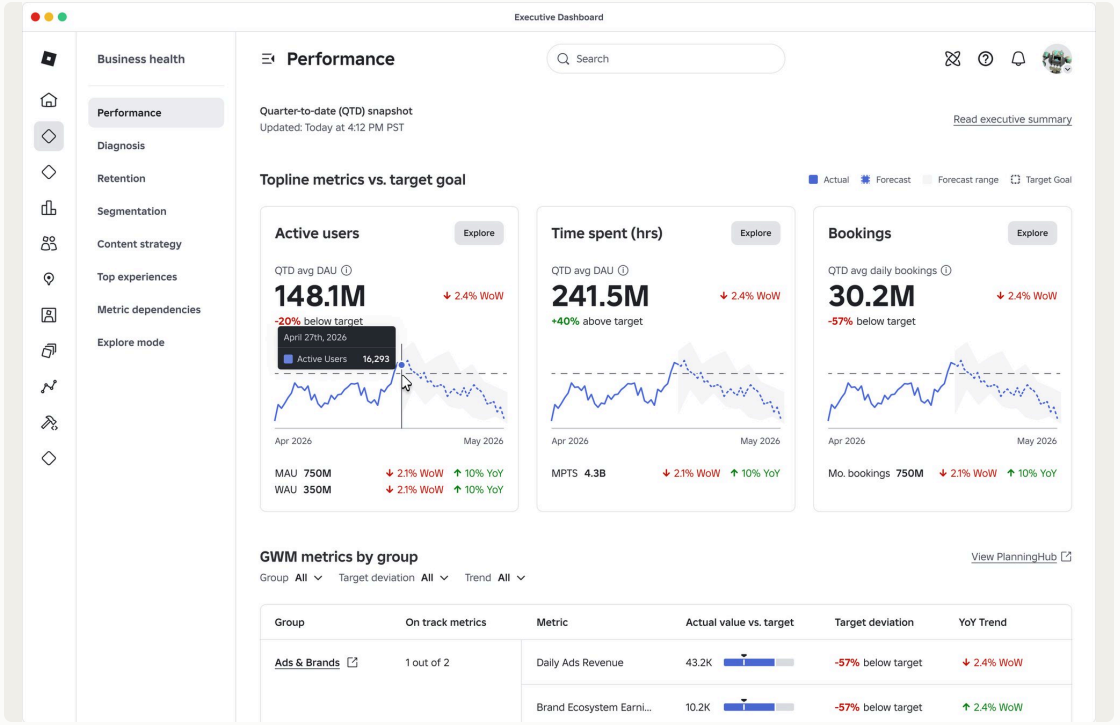

05 — Hover state for our chart types

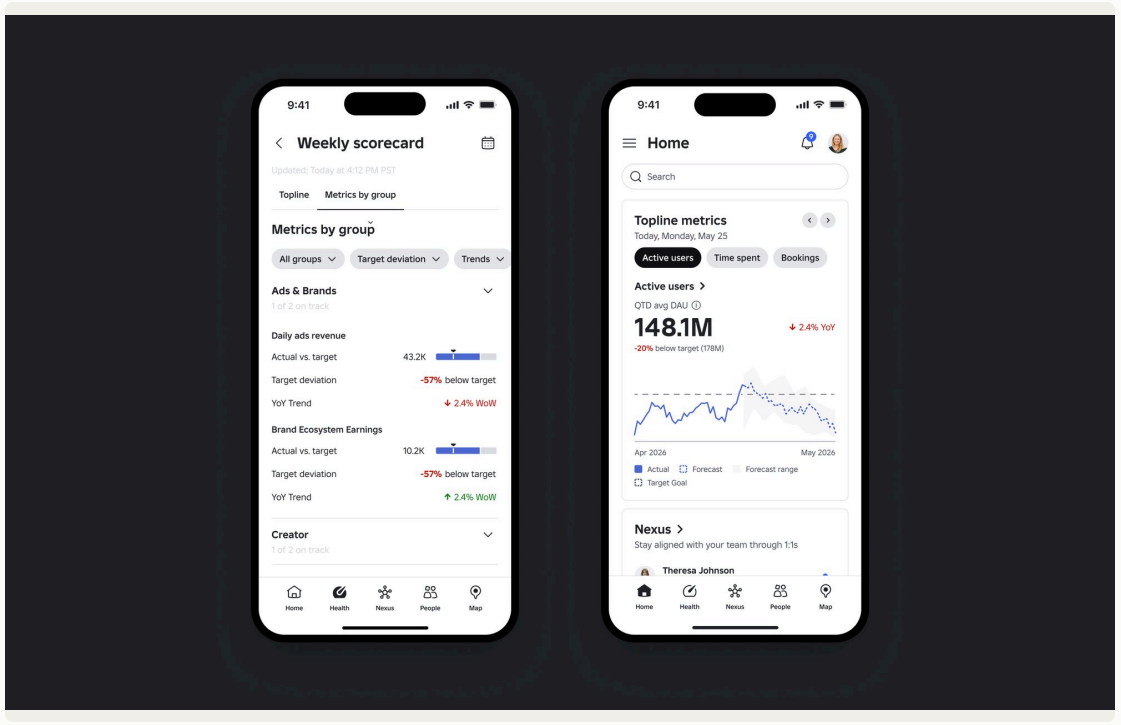

06 — Annotations provide creators with context VIDEO ON SITE

07 — Communicating confidence for an experiment result VIDEO ON SITE

08 — Supported other projects like topline/GWM metrics

09 — Everything shown on this montage is also mobile-optimized

OUTCOME & LEARNINGS

To give you a glimpse into our launch outcomes:

1. 20k+ games adopted custom dashboards within the first week of launch
2. 10.6% of top games and almost 800 games ran experiments with an average +5.6% lift in playtime in H2 '25.
3. Analytics insights led to downstream +7.3% lift in Studio usage and +8.7% lift in publish days.

So many learnings, but at the end of the day, I'm immensely proud of this team and thank our creator community for their feedback and support.

03 · DEC 2024

Zhorai

A K-12 AI literacy platform to create with and explore AI and machine learning concepts

ROLE	Founding designer and creator
TEAM	Solo
TIMELINE	Jan - Dec 2024
OUTCOME	Piloted with 10+ families where we saw high engagement and evidence of learning.

www.phoebezlin.com/work/zhorai

CONTEXT

AI literacy has become a critical skill for children to navigate this new era of the internet, and yet few resources exist to scaffold this learning. Zhorai takes a two-pronged approach with interactive lessons and a creative studio.

KEY DECISIONS

01 Conversation as an interface

Voice as a modality is familiar and a low barrier to entry. How do we design the flow of the learning arc to accommodate multiple conversational pathways?

02 Embedding creativity and learning science

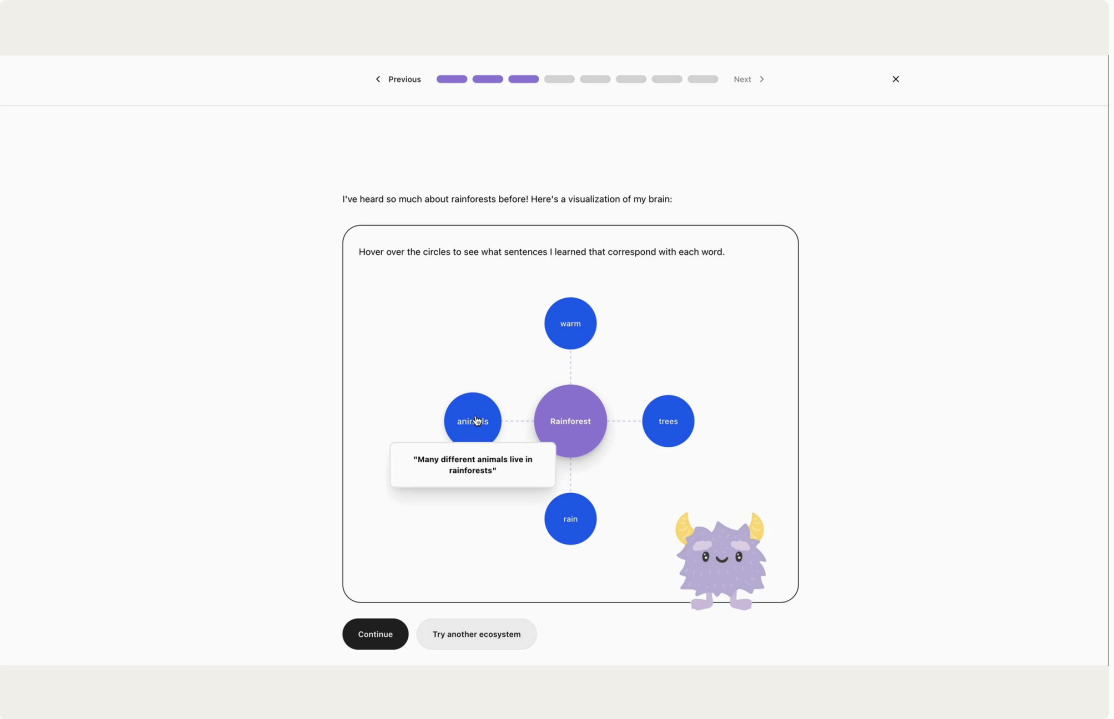

How do we design the learning activities to be fun while also adhering to learning principles, such as cognitive load, trial and error, and scaffolded curricula?

03 How to scale (still a WIP)

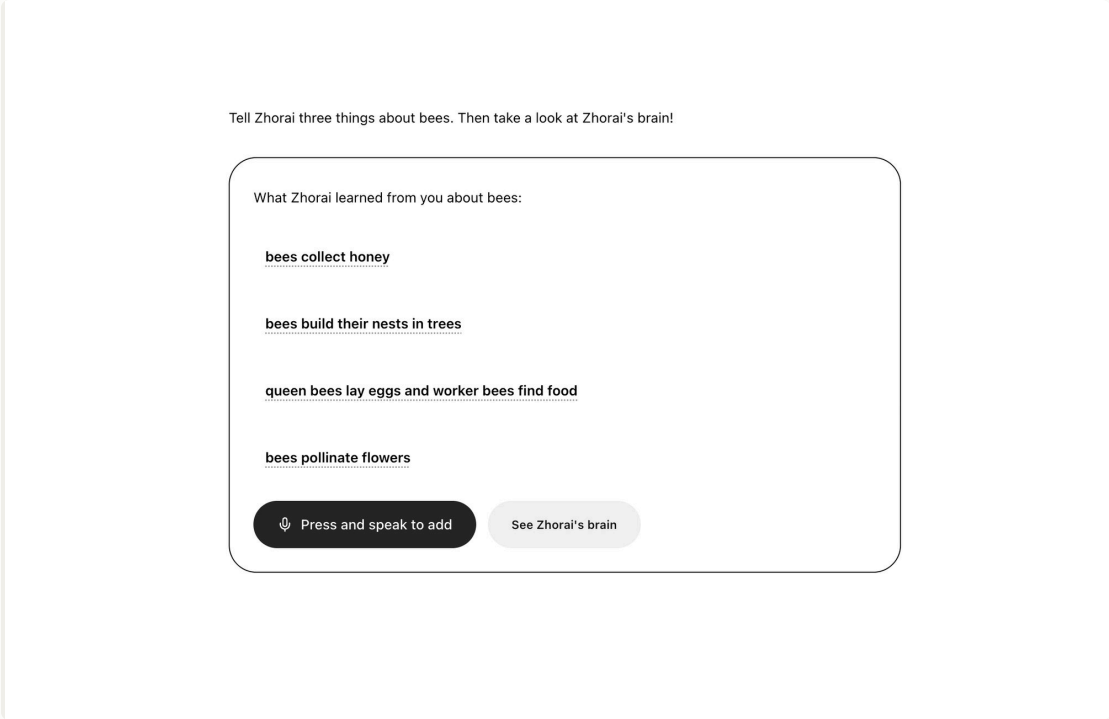

When we ran the pilots, we facilitated the learning experience in person. Million dollar question: how do we implement a self-directed version at scale?

OUTCOME & LEARNINGS

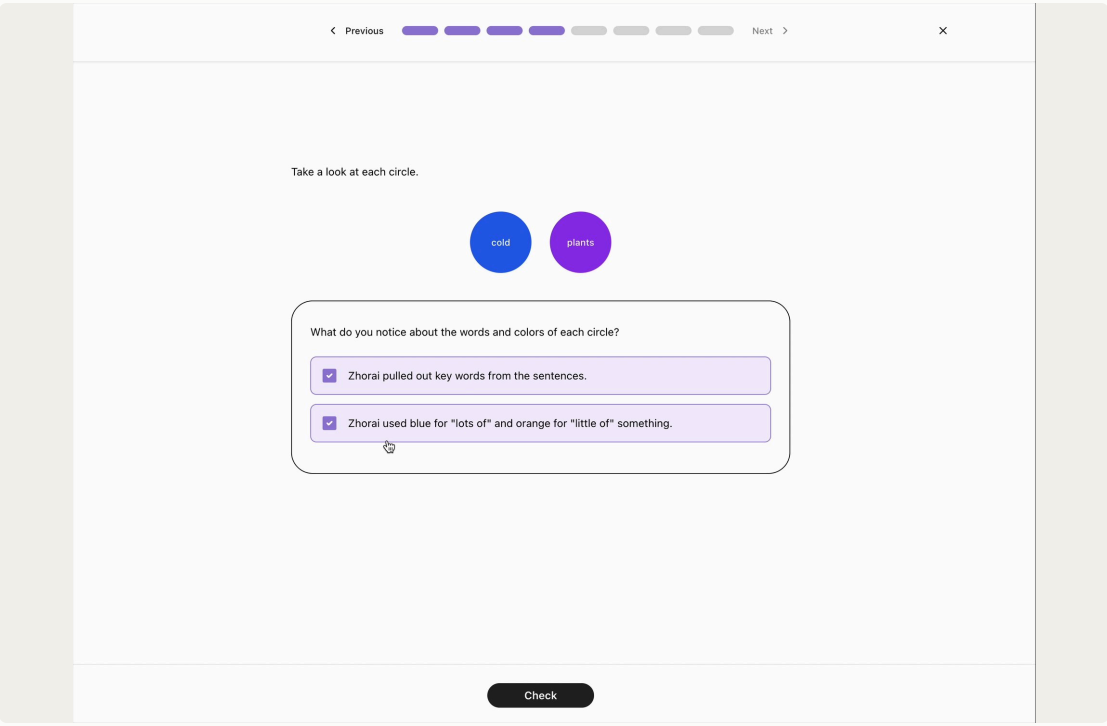

"I want to teach Zhorai more. I want to teach Zhorai things like my favorite color is blue." These kinds of student testimonials really keep me going. As this is truly still a work in progress, I'm constantly learning and actively developing this project.

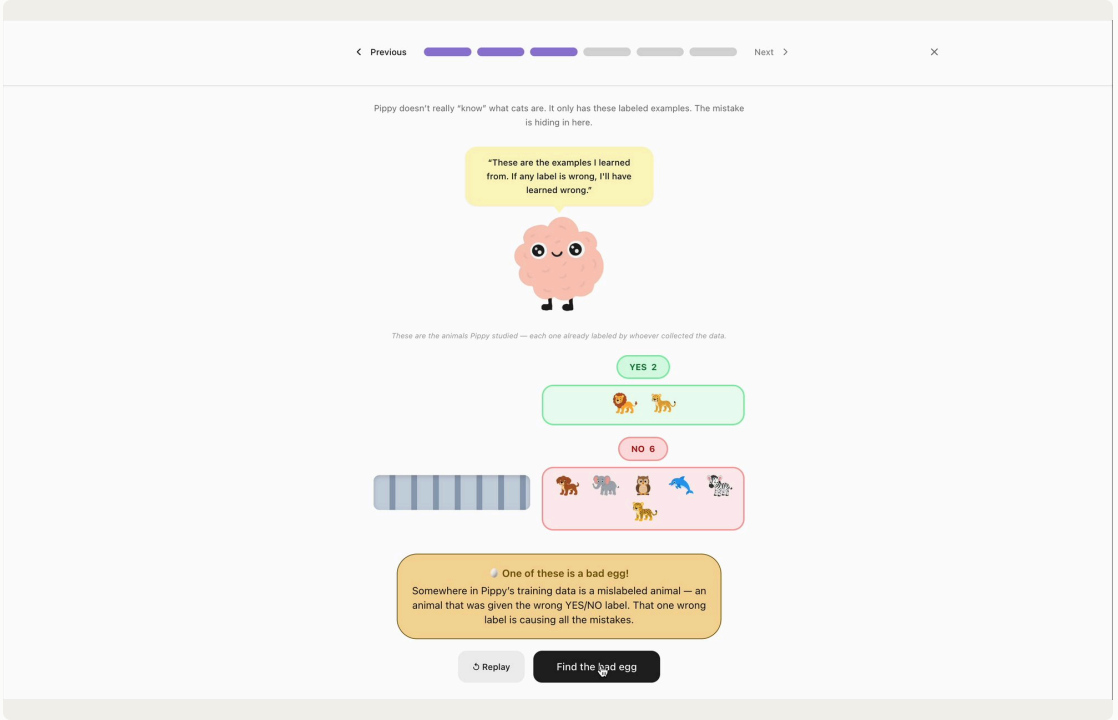

01 — Talking to Zhorai and observing what Zhorai knows about ecosystems (understanding AI mental models) VIDEO ON SITE

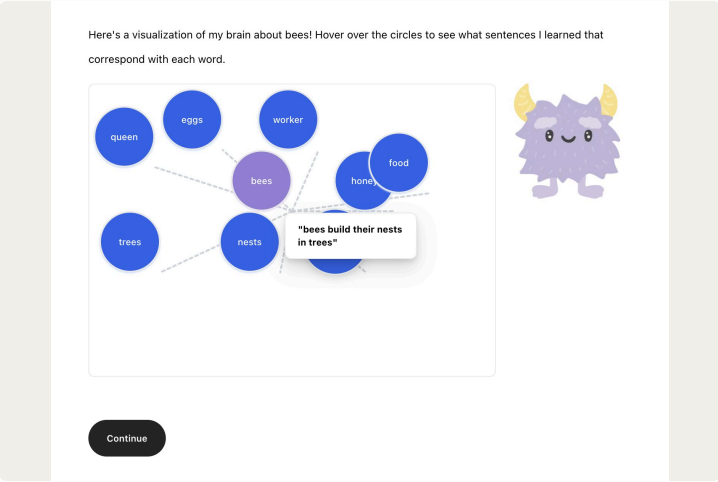

02 — Teaching Zhorai about animals (how AI learns from data)

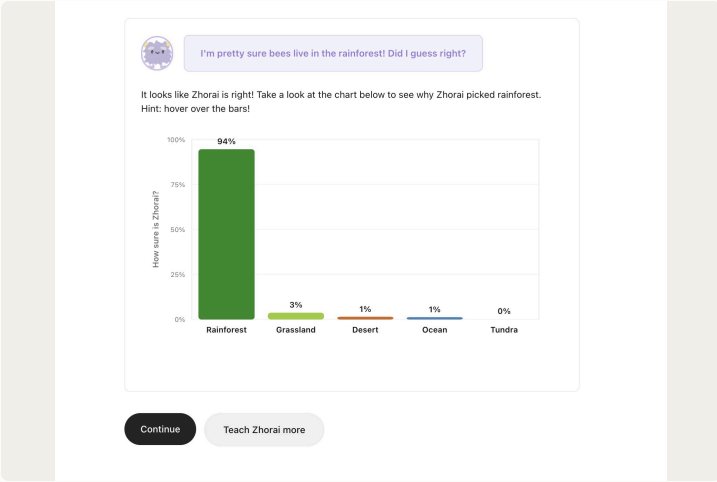

03 — Student checks for understanding VIDEO ON SITE

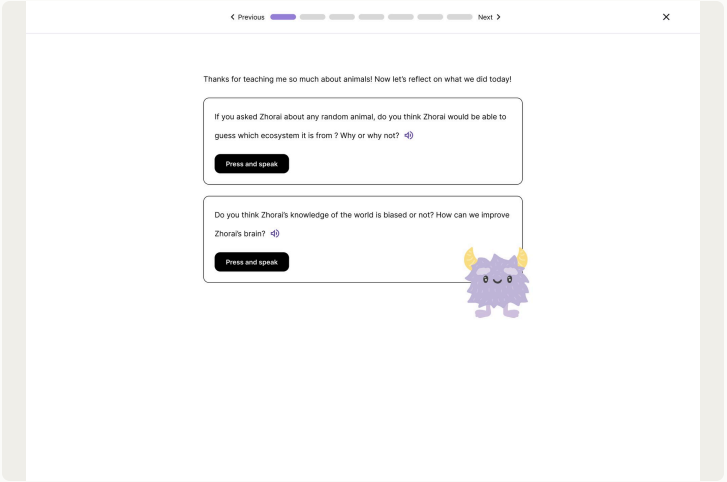

04 — Pippy, another learning activity about identifying bad data VIDEO ON SITE

05 — Utilizing mindmaps to visualize Zhorai's brain (how data is represented)

06 — Introducing a basic bar chart to visualize how AI makes decisions

07 — Post-activity reflection about AI ethics

04 · DEC 2022

CZI Summit Learning Platform

A rearchitecture of our learning platform to accommodate any type of curricula and assessments

ROLE	Senior product designer
TEAM	2 designers, 2 researchers, 1 PM, 1 eng lead
TIMELINE	2021-2022
OUTCOME	Conducted countless educator and student interviews, iterated a ton, designed an MVP, ultimately the platform was sunset. Still lots of learnings!

www.phoebezlin.com/work/summit

CONTEXT

After an org-wide strategy shift, the Summit Learning Platform was finally ready for a redesign that was long overdue. The core instructional and projects flow were clunky, and the new platform needed to accommodate any type of curricula and assessments. We came up with six novel IA approaches, and prioritized two with engineering to move forward with.

KEY DECISIONS

01 Any curriculum, one platform

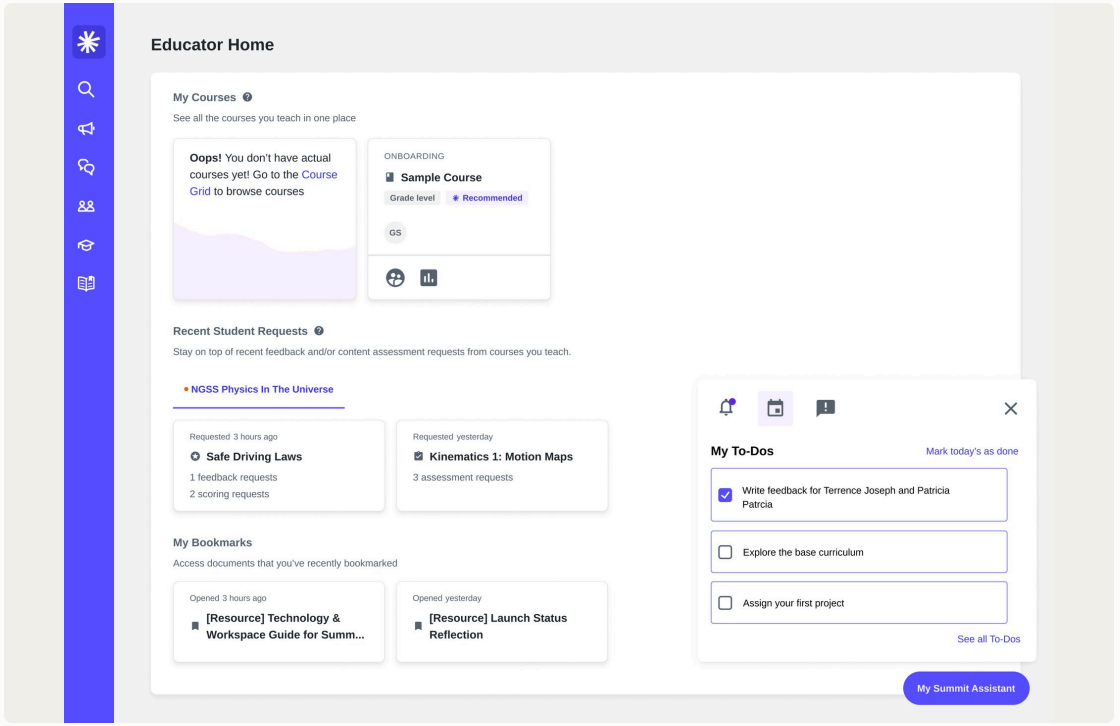

How do we let schools bring their own curricula and assessments without fragmenting the experience for teachers and students?

02 Evaluating IA models

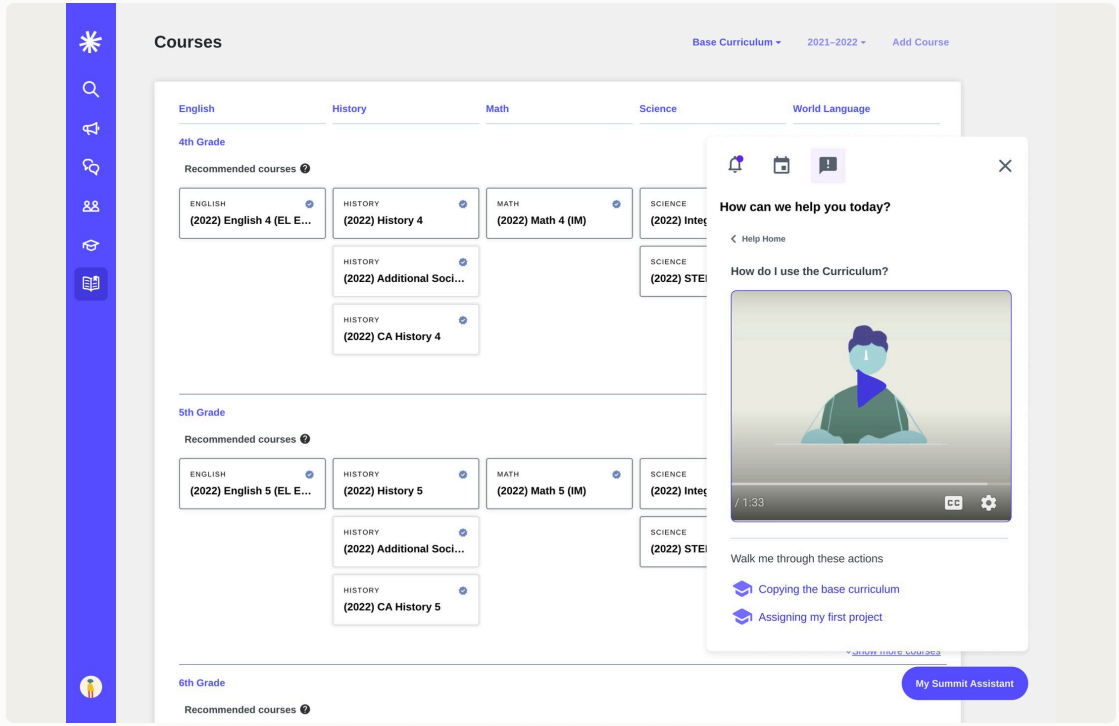

The curriulum model organizes information based on curriculum structure and prioritizes helping teachers understand student progress and identify differentiation opportunities. The mode-based model organizes based on what the user is doing in the moment, and prioritizes by JTBDs. How do we evaluate the tradeoffs for each?

OUTCOME & LEARNINGS

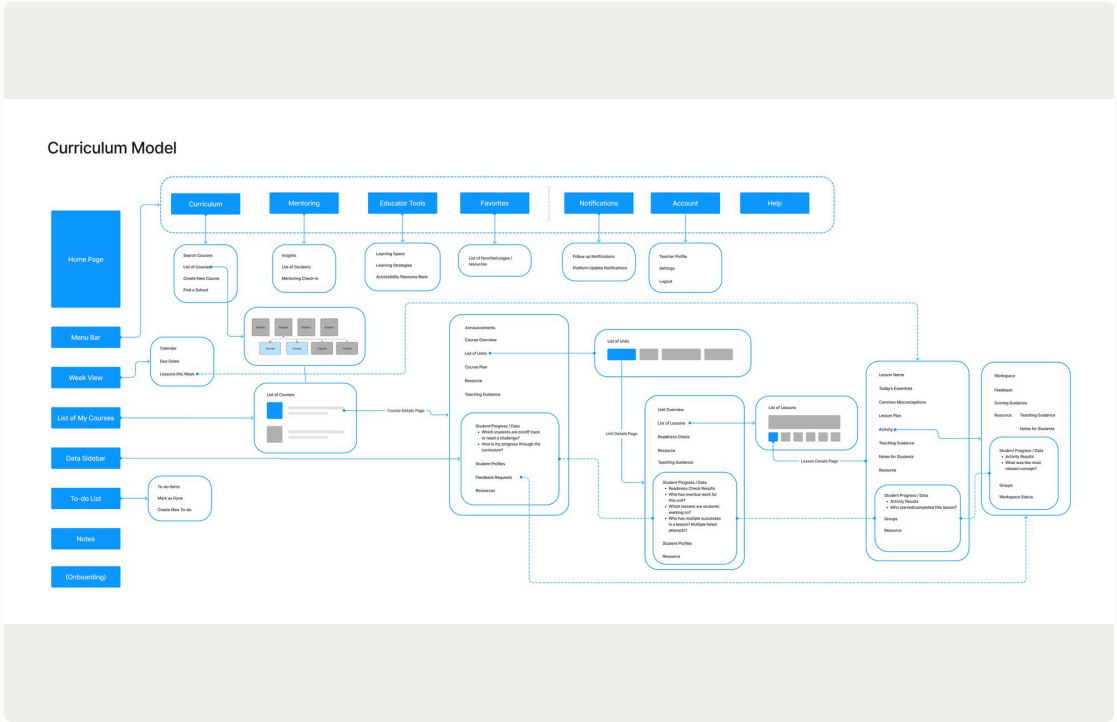

Building the Summit Learning Platform brought together diverse expertise, including design, research, product, eng, learning scientists, and educators. Together, we landed on a new model that we had high conviction for.

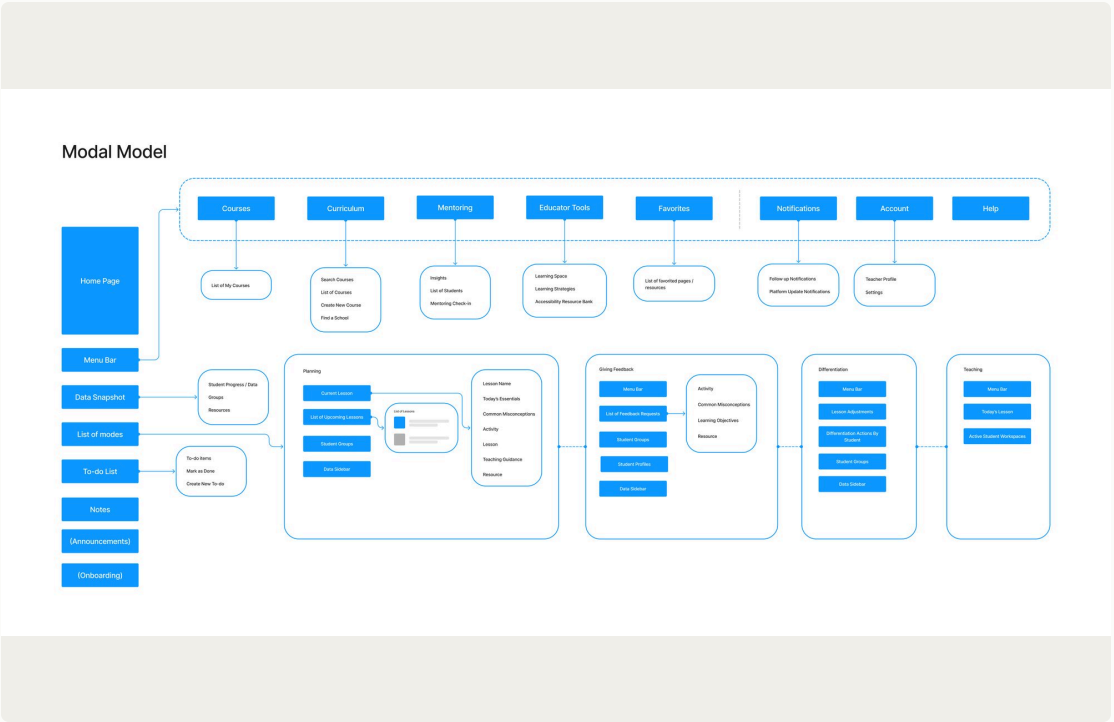

01 — Educator Home

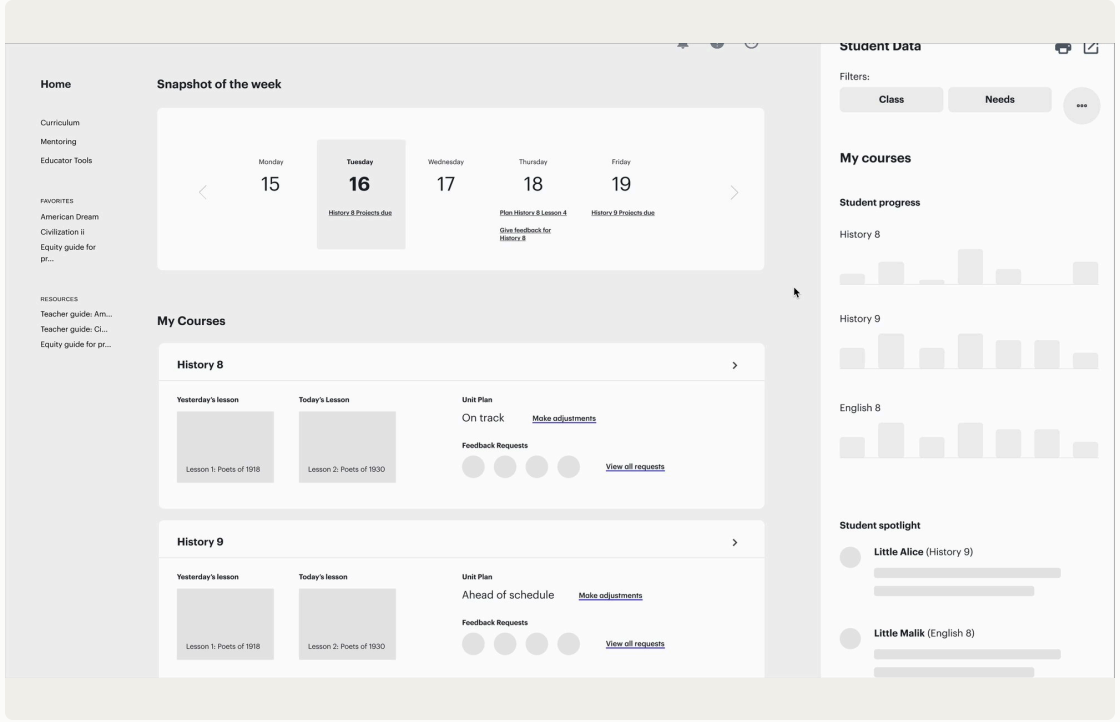

02 — Courses page

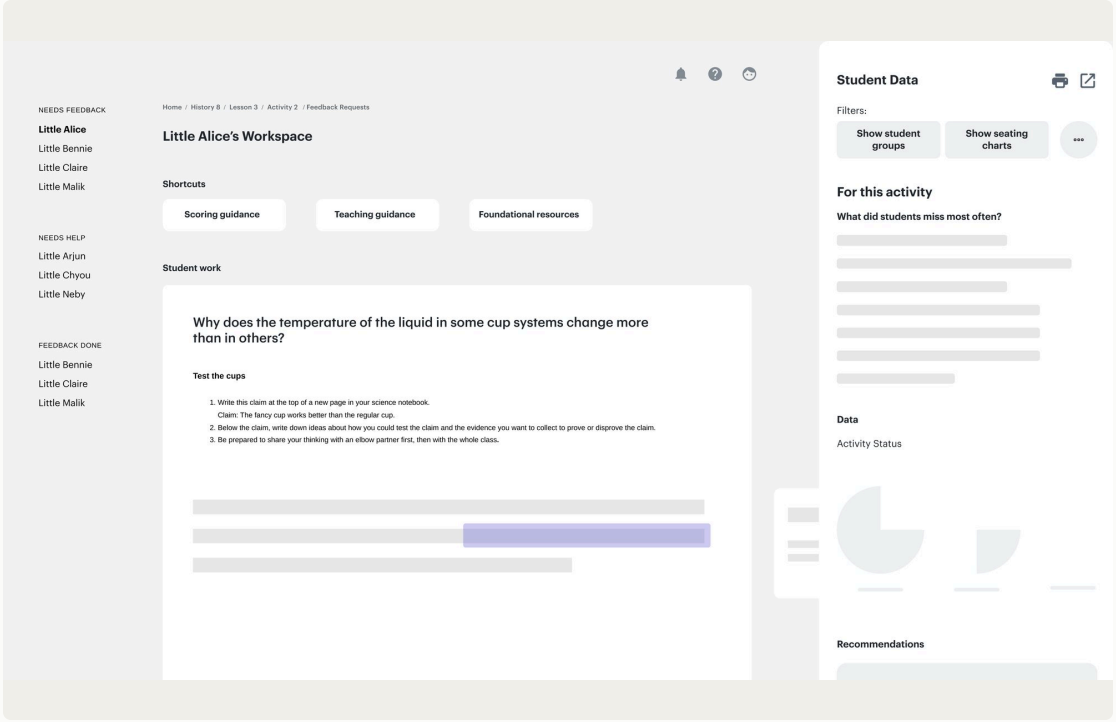

03 — IA model based on curriculum structure

04 — IA based on user modes

05 · JUNE 2023

CZI Self-Directed Learning

A new product bet exploring how to empower students to take charge of their own learning

ROLE	Founding designer
TEAM	1 Designer, 1 PM, 1 Eng lead
TIMELINE	Jan - June 2023
OUTCOME	This exploration turned into a product collaboration with GripTape, a CZI program partner, where we worked with them to scale their offering of empowering young people to pursue their own passion through a self-initiated project.

www.phoebezlin.com/work/self-directed

CONTEXT

As founding designer on a new product bet, we explored how to empower students to take charge of their own learning. We built an interest exploration tool that exposed students to new fields and ideas, then connected established interests to the skills they practiced in class.

KEY DECISIONS

01 ### Exploring to find interests

How do we expose students to new fields and ideas in a way that sparks genuine curiosity rather than overwhelming them?

02 ### From interest to skill

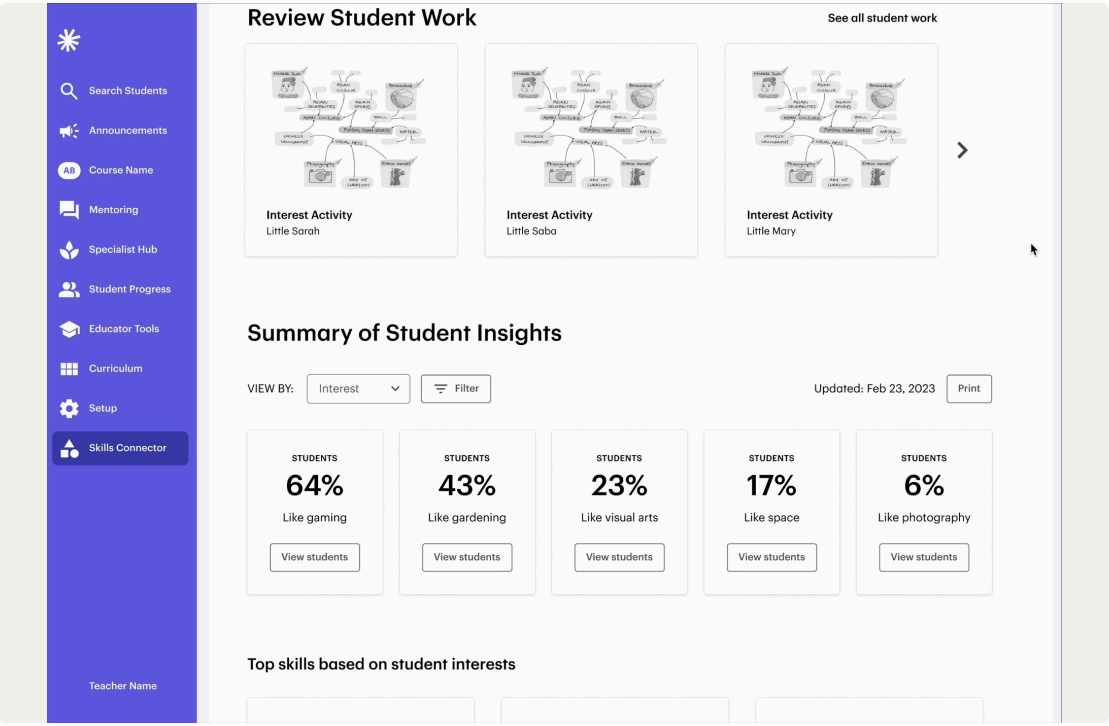

How do we connect an established interest to the concrete skills a student practices in class?

03 ### Expanding GripTape

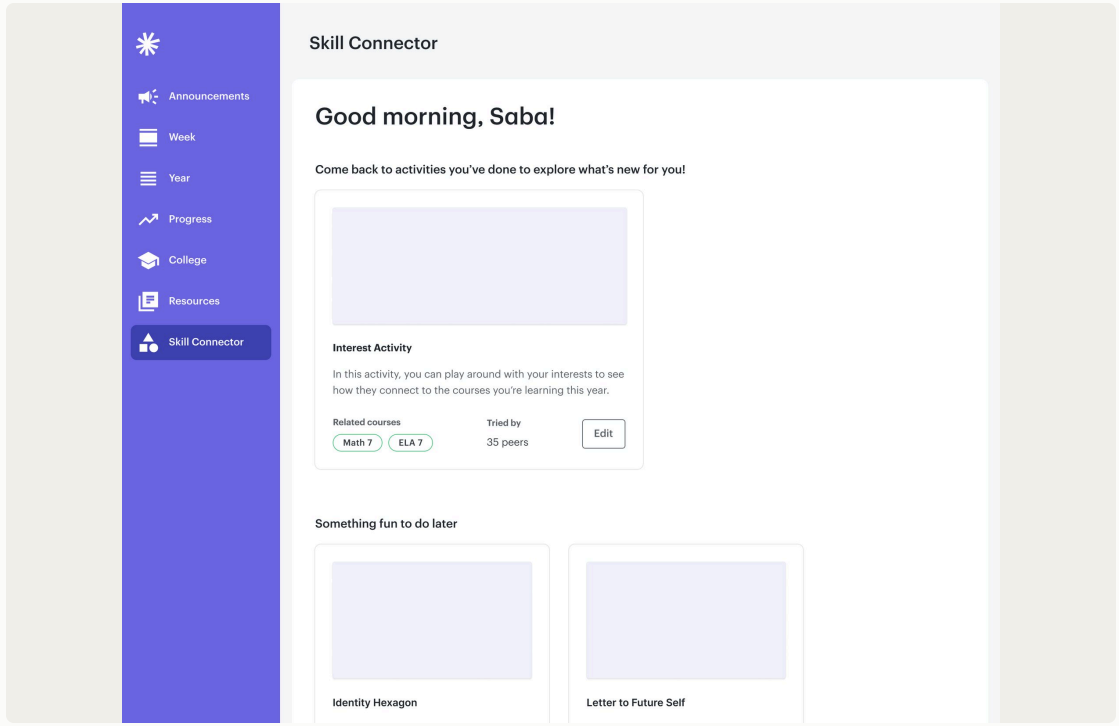

How do we establish solid co-design processes while balancing the CZI-grantee relationship? How do we identify their bottlenecks and remove obstacles for them?

OUTCOME & LEARNINGS

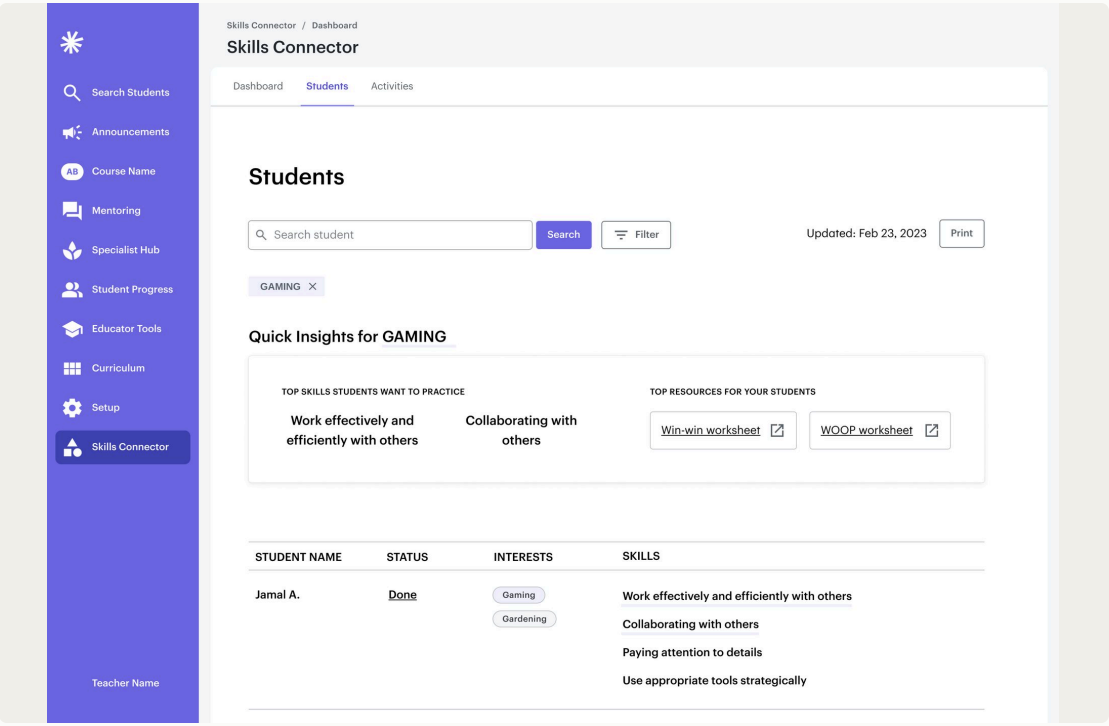

The collaboration with GripTape brought a new lens to the work because our value was to amplify them and their work. Co-designing with them and their student leadership panel was such a joy.

ABOUT

I'm a product designer based in the bay area. I'm good at taking complex, ambiguous spaces, and turning it into things that are intuitive and simple. I thrive in collaborative teams.

MY BELIEFS IN A NUTSHELL

Assess impact

I'm driven by knowing how and how much our work impacts humans -- both positively and negatively, and then working towards progress. I bias towards action by asking what is the smallest experiment we can run to get us closer to our goals?

Collaborate thoughtfully

Everyone brings their expertise to the table, and nothing easy is accomplished alone. My collaboration style is thoughtful and inclusive by asking who are the voices that need to be represented that aren't, and how do we bring our users and the broader organization along with us?

Make the hard decisions

Hard decisions are hard, but someone needs to make them. Failure is not a wrong decision, but rather not learning at all. I often ask what information and hypotheses do we have at hand, what tradeoffs are we making, and what can we learn from this decision?

EXPERIENCE

2023 **Design Lead / Staff Product Designer**
Roblox

2020 **Senior Product Designer**
Chan Zuckerberg Initiative, Education

2018 **Human-Computer Interaction Researcher**
Harvard / MIT Media Lab

2017 **Product Designer**
SchoolCity (Acq by Illuminate Education)
